

Meter Upgrade Program

Joe Tellez

Chief Technology Officer

Project Overview

Installing upgraded power and water meters at all homes and businesses

- Meters will use wireless technology to transmit data to TPU
- Only usage information - no customer-identifying data, like names and addresses
- Multiple security layers, including encrypting data

Why Upgrade?

Current meters are at end of lifespan

- Technology is up to 75 years old
- Most other utilities in region have upgraded, TPU is catching up

Improve service and deliver power and water services more efficiently

- Customers are interested in services enabled by upgraded meters
- Give customers greater control of electric and water use

Key Benefits

- Timely access to data
- Better information about problems on system like power outages and water leaks
- Read meters remotely
- Timely service connection and disconnection

Timeline

2017 through 2019

Planning, design, & engineering

2020 through 2021

Installation of meters
