Agenda

• Background
• Challenges
• Potential solutions
• Click! budget adjustments
• FTE status
• 2019-2020 Click! proposed budget
• Cable TV and Internet rate tables
• Market rate comparison
• Summary
• Next steps
**Background**

- For the 2017-2018 biennium, Click! is expected to post a deficit of approximately $6.5M
- A preliminary draft budget for the 2019-2020 biennium projected a deficit of approximately $9.9M
- Click! Network financial deficits have historically been funded by Tacoma Power
- Cable TV rate increases were not implemented in 2015 and 2016
- The 2017 Cable TV rate increase implemented, but 2018 was postponed
- On an A La Carte basis, Click! Cable TV rates are under market
- No Wholesale Internet rate increases implemented in the last decade
Challenges

• Superior Court decision prohibits the use of Tacoma Power funds to pay for Click! deficits
• City’s General Fund is not in a position to support Click! deficits
• It is not entirely clear if City Council can/will approve Tacoma Power budget with a Click! deficit
• Transition to a Public/Private Partnership is expected to take 12 to 18 months
• It is unclear, at best, whether Tacoma Power can fund Click! business transition costs such as retention and severance for employees
• These conditions require Click! to present a fully self-funded budget
Potential solutions

• Raise Cable TV rates
  • 30-day FCC customer notice requirement
  • 45 days to complete approval process
  • Could effectuate as early as 12/1/18 if approved by 9/30/18

• Raise Wholesale Internet rates
  • 90-day contractual advance notice provision
  • Could effectuate as early as 1/1/19 if noticed by 9/30/18

• Reduce O&M and Capital costs
  • Reduce FTE to 54 via attrition and augment with contract support
  • Limit capital expenditures to critical needs and plant extensions
  • Recognize transitional costs such as retention and severance
  • Measures are drastic and in response to the extraordinary circumstance
## Click! budget adjustments [Reduced Capital and FTEs]

*Historically used Comcast’s A La Carte rates for comparisons
^We anticipate Comcast to implement rate increases in 2019 and 2020 that would produce a gap

- Room to implement proposed Cable TV rate increases
- May not be desirable to fully close the market gap
  - Competitors have the ability to bundle products and offer deep discounts on their A La Carte prices
  - Continue to meet policy goal of maintaining below market rates
Summary

• The proposed 2019-2020 Budget entails drastic cost cuts and revenue enhancements
• Labor and capital cuts are necessary, but not sustainable long-term
• Augmentation of contract labor achieved as a result of a Letter of Agreement with IBEW Local 483
• Raising Cable TV and wholesale ISP Advantage rates is necessary
• The proposed “transition” budget temporarily resolves legal and budgetary constraints
• The proposed budget should not be viewed as a viable financial model

BUDGET RISKS AND MITIGATION

Risks

- BPA Rate Increase
- Wholesale market power prices
- Weather
  - Stream flows
  - Temperature
- New/Expanded Regulatory Mandates

Mitigation

- Adverse Water Planning
- Regular monitoring and reporting of revenue and expenses with adjustments as needed
- Wholesale Energy Risk Management program
- Use of Reserves
  - Current Fund balance
  - Rate Stabilization Fund
- Additional Financing
  - Line of Credit in lieu of bond financing
- Additional Rate Adjustments

Efficiencies – Revenue/Financial

In response to 6/27 Board Study Session question from Board Member Larkin (ACTION ITEM 26)
### Efficiencies

#### Resourcing/Staffing
- Consolidation of work groups with transferable skills and related responsibilities
- Use of contractors during peak seasons

#### Operations/Planning
- Hydro Operations Optimization – Power Management and Maintenance meet quarterly to plan for two years

#### Streamlining
- Tacoma Power took over operation of the Cowlitz Falls fish facility from the WDFW to reduce costs and improve coordination with the adjacent fish collector

#### Technology
- Use of unmanned Aircraft System provides aerial imagery of TPU locations and reduces risks to employees, physical assets, the environment and our customers
Preliminary O&M Budget

Revenue/Financial

Innovative Wholesale Products & Services
- Increased sales of non-traditional products such as Low-Carbon Asset Controlling Supplier (ACS) power, Capacity, Frequency Response
- Leverage of recent role as a Scheduling Coordinator to transact directly with the California ISO (CAISO)

Pole Rental
- Due to PUB approved rate adjustments, pole maintenance costs shared more equitably with pole attachment partners (approx. $450,000-$1,000,000 annually in pole rental revenue).

Debt Restructuring

![Historical and Scheduled Debt Service](chart)
Long Term Investments to Deliver Value

Asset Management
- Data-driven asset spending decisions to get the most value from our assets
- Whole life cost analysis – evaluating the total cost over the life of the asset to make sure it’s as low as possible
- Standardized, repeatable processes to support knowledge transfer and efficiency improvements

Stand-up Construction PMO
- Standardized project data, project performance, benefits realization
- Improved project risk management
- Better project development and decision-making

AMI Implementation
- Customer engagement and digital services enhancement
- Improve the ability to anticipate, detect and respond to system disturbances and outages
- Optimize asset utilization and operate more efficiently

2019/20 Preliminary Revenue Budget

Biennial Increase: 7.3%
Preliminary Revenue Budget

Revenue Components: Retail Revenue

- 19/20 Retail Revenue budget is $54M more than the 17/18 Budget
- 19/20 budget increase is due to compounded 5.9% rate increases from 17/18
- Assumes a 2% rate increase on April 1, 2019 and April 1, 2020
- Retail load is anticipated to remain flat

**Biennial Increase: 7.9%**

</tbody>
</table>
Preliminary Revenue Budget

Revenue Components: Wholesale Revenue

- Actual 17/18 Wholesale revenue expected to be $25M more than budgeted
- Increase in 17/18 actual revenue due to increased sales of non-traditional products and average water conditions
- 19/20 budget is $13M more than the 17/18 Budget
- Increased presence in the CA market contributing to more revenue

Biennial Increase: 14.9%

BUDGET SUMMARY

• 3.8% Increase for 19/20 budget
• Budget supports our strategic plan and operational needs in 19/20
• FTEs are down overall
• Largest budget drivers are non-discretionary
  - Purchased Power
  - Taxes
  - Assessments
• Short-term and Long-term efforts to manage costs and revenue requirement
  - Wholesale Revenues
  - Debt restructuring
  - Vacancy Rate
  - Revenue requirement based on historical spending
  - Asset Management and Project Management Office

</table>
APPENDIX - Efficiencies

Resourcing

+ We have a Power-wide contract in place for supplemental labor, allowing us to address peak season needs with seasonal workers and contractors.

+ Industrial automation allows for lean staffing at remote sites.

+ Leveraging our existing resources, we have managed to significantly increase our efforts to promote residential solar and address equity issues around solar. These efforts have also resulted in a considerable amount of research to support electrification of transportation.

+ Recently consolidated work groups with transferable skills and related responsibilities are fostering interdependence of specialized functions (e.g. Substation, Protection & Controls Engineering, Line Engineering & Standards) and are more capable of backing each other up. This has also been applied to administrative groups to increase coverage and internal backfill capability.

+ We have reduced Substation Operations staff (approx. savings of $100,000/year).
APPENDIX - Efficiencies

Operations

+ Hydro Operations Optimization - Operations and Maintenance meet quarterly to plan and optimize the next two years of hydro operation.

+ Recent standardization of major hydro equipment reduces the cost of spares and training, as well as improves staff’s ability to make changes and repairs. This is the first time in our history where the replacements were planned as a program across the fleet.

+ To-date, Tacoma Power has eliminated 21 vehicles from its fleet as a result of the recent Fleet study. In addition to the replacement costs saved, this also eliminates overhead and maintenance costs associated with those vehicles.

+ By increasing revenue through sales of non-traditional products, we have reduced the amount of revenue required from retail customers by $8.7 million. Such products include selling Low-Carbon Asset Controlling Supplier (ACS) power, Operating Reserves, Capacity, and Frequency Response. We are also leveraging our recent role as a Scheduling Coordinator to transact directly with the California ISO (CAISO).

+ For interactions with CAISO, we were able to build an in-house reconciliation software tool which allowed us to avoid selection and use of a costly software alternative which would have likely cost hundreds of thousands of dollars per year.

+ By looking at the utility cost test, as well as the Total Resource Cost test, we are able to increase our focus on programs that cost customers less in their rates than other programs.

+ Review of asset failure data has allowed us to postpone direct buried cable replacement while we continue to install conduit using low-cost, horizontally-directional drilling methods. This practice reduces the street and sidewalk restoration needed (approx. savings of $500,000/year).
Asset Management is evaluating maintenance intervals to transition away from strictly time based maintenance, when appropriate. The philosophy is to do the right tasks at the right time to the right equipment. Generally, this is expected to lengthen maintenance intervals.

By acquiring vise-top insulators, we have expedited the ability to “clip-in” when installing a new conductor or replacing a pole.

Due to PUB approved rate adjustments, we are able to share pole maintenance costs more equitably with pole attachment partners (approx. $450,000-$1,000,000 annually in pole rental revenue).

We are reducing pole ownership costs by allowing wireless attachments to Transmission & Distribution poles with standardized fees, construction standards and personnel safety training.

After researching multiple Automatic Vehicle Location (AVL) systems, Fleet Services selected one which resulted in lower O&M costs for service. The new AVL also meets our need for satellite coverage for outlying areas, which will improve employee safety and provide more comprehensive engine diagnostics, thus improving maintenance planning.

We are planning to engage in more formal project management in 2019 with a narrower set of project managers to expedite learning and promote consistency.

By utilizing NWPP to develop training material, we are lowering the cost of continuous education training for our NERC Certified Dispatchers.
Streamlining

+ Creation of a new task order system for Natural Resource contracts reduces the number of contracts we must manage and provides better controls and flexibility.

+ In 2017, Tacoma Power took over from WDFW operation of the fish facility at Cowlitz Falls. This reduces costs and improves coordination and efficiency with the operation of the adjacent fish collector owned by Tacoma.

+ We are achieving administrative efficiencies through online permitting, online service disconnect/reconnect, and billing process changes.

+ Fleet Services is partnering with General Government Fleet on an Environmental Action Plan (EAP) to reduce our carbon footprint, with a focus on electrical vehicles and biodiesel. While increased fuel costs may result, the environmental costs and fleet maintenance costs are expected to be lower.
APPENDIX - Efficiencies

Technology

+ We introduced new IT technology, termed ‘virtualization’, into our automation systems to reduce the hardware and software maintenance costs. We are among the first industrial systems to do so.
+ We now AutoCAD Vault to manage civil engineering designs more efficiently.
+ Recent use of robotic survey instruments allows one survey crew member to perform a survey instead of multiple crew members.
+ Installation of remote cameras allows us to track recreational and wildlife uses.
+ As a result of the service integration approach to the SAP system hardware upgrade, we achieved labor savings in the form of developer hours, analyst hours and end-user testing hours. Had we used a point-to-point integration approach as we have in the past, we would have had impact analysis, coding and/or configuration changes, as well as end-user testing for three systems resulting in many hours of work.
+ The recent use of Small Unmanned Aircraft Systems (sUAS) to provide aerial imagery to Tacoma Public Utilities business units reduces risk to employees, physical assets, the environment and customers. Over the past year, UTS has provided 8 UAS flights resulting in substantial savings from reduced man-hours to capture necessary data, reduction in use of external contracts, and quicker response time (preventing delays to projects).
+ We are in the process of implementing Workforce Connect, a mobile workforce management system that will improve productivity and efficiency.
+ The new EMS system is improving operator system awareness, reliability and automating manual tasks. We are also configuring this system to eliminate the need for Peak RC’s hosted advanced applications for real-time assessments.

We are here.

Revenue Requirement set here.
The Tacoma Power Revenue Requirement is a forecast of the amount we needed to cover all of the utility’s expenses and meet financial plan goals.

Tacoma Power’s 2019/2020 Revenue Requirement forecast assumptions are provided in the June 27, 2018 Revenue Requirement presentation.

</table>

Difference in Revenue Requirement and Budget will be managed by Tacoma Power through controlling expenses, use of the **Note Purchase Agreement** ($100M), or cash balances.

A request for an additional rate increase may also be made as a last resort.

In response to 6/27 Study Session from Board Member Flint (ACTION ITEM 27).
The recommended 2% system-average rate increase in 2019 and 2020 is designed to meet DSCR targets, manage cash levels, and minimize rate spikes in the future.

</tr>
</tbody>
</table>

**NOTE:** Illustrated prices hold Recommended 2020 rates constant. These rates are subject to change.
Rate Design

Information will Inform Future Rates

To qualify for the rate, Electric Vehicle Charging Stations must...
• Have separately metered service
• Be broadly available to the general public
• Have at least one DC fast charger
• Demand no more than 1 megawatt of load

Pilot is limited to...
• 13 Years, January 1, 2019 – December 31, 2031
• 25 public DC Fast Charging Stations, on a first-come, first-served basis

Bi-annual reports will include...
• Locations of participating stations
• Aggregated utilization and sales statistics
Limited Ancillary Loads Permitted

Ancillary loads...
- must be related to the provision of Electric Vehicle charging
- must not collectively exceed 5 kilovolt amps (5 kVa)

What will 5kVa support?
It depends on the characteristics of the ancillary loads. With 5kVa, a site would be capable of providing vending machines and ample lighting for its patrons.

In response to 8/8 Study Session question from Board Member Cooley (ACTION ITEM 33).
Rate & Financial Policy

Rates Process
Section 1.5
Rate & Financial Policy

Rate and Financial Policy Updates

1. Low-Income and Senior/Disabled Assistance Programs

   Addresses programs available through utility assistance programs. “The needs of low-income, senior, and disabled electric customers will be considered when establishing rate levels, providing bill assistance, and offering financial education.”

2. Rate Stability

   Sets an objective that seeks to stabilize rates and better align with Water’s rate and financial policies. “To the extent possible, rate adjustments should be as level across years and not exceed general inflationary trends.”

3. Class Rate Increase Cap

   Addresses caps for class rate increases and enables better alignment with Water’s rate and financial policies. “Rate adjustments may be phased-in over a limited time period and may be used if a disproportionate change in rate levels is expected for certain classes. Inter-class revenue requirements adjustments significantly in excess of the system average may be allocated proportionally to the remaining customer classes. A gradual approach may be used for the subsidized class to set subsequent rate increases until cost-of-service rates are reestablished.”
02 Public & Customer Outreach

+ Public Outreach

+ Next Steps
Public Outreach Timeline

Where we’ve been...

8/13 Lakewood
8/20 Fircrest
8/27 Metro Parks
9/4 Federal Way
9/17 University Place East Side
9/24 - 9/26 Korean Women’s Association
10/15 South End
8/21 Fife Pierce County
9/10 North End
9/19 South Tacoma West End
9/20 Northeast
10/20 Black Collective

...and where we’ll go.
Public Outreach Themes

Rate proposal has been generally well-received.

- **Common Themes from Franchise Jurisdictions:**
  - Value proposition generally well-received by audiences
  - Desire for more representation for outside-City customers
  - Questions about AMI rollout and related cybersecurity/data privacy risks
  - Request for more outreach to low-income customers

- **Common Themes from Tacoma Neighborhood Councils:**
  - Value proposition generally well-received by audiences without any major issues or concerns
Public & Customer Outreach

Rates Outreach & Communications

Communications

- **Complete**
  - July *Utilities and You* newsletter story
  - Updated web page and banners
  - E-mail list sign up online
  - Bill message
  - Handout for public meetings
  - Translated versions of handouts
  - Updated public meeting info online and social media

- **Upcoming**
  - October *Utilities and You* newsletter update
  - Video
  - E-mail notification to customers
  - Newsletter content for business customers and other orgs
  - Lobby messaging
  - Materials for Oct 10 evening session (to be posted in advance)
Public & Customer Outreach

McChord Participation Protocol

Negotiations focused on three issues, with most focus on the third.

1. Classification of Tacoma-Power-Owned Hydroelectric Production Cost.

2. Classification of Bonneville Power Administration (BPA) Power Cost.

3. Allocation of Demand-Classified Production Cost. In the initial COSA, this cost is allocated based on an load patterns during the entire year. The military consultants advocated for an allocator based on load patterns during the winter only. This results in a lower rate increase for the HVG and CP classes, and a higher increase for the Residential class, because residential usage is the most seasonal.

Tacoma Power has recommended studying this issue and producing a full report and recommendation for use in the 2021/2022 rate case, because:

1. This is a significant change from longstanding practice.
2. Area utilities with similar power supplies use a wide variety of methods.
3. Changing methodologies would have a substantial impact on the residential class.

The rate recommendations shown in this presentation assume no change to allocation methodology for the current rate case.
Public & Customer Outreach

Next Steps

**September 26th**
- Study Session: Public Utility Board Budget & Rates Presentation

**October 2nd**
- GPFC Power, Water and Rail Rates Presentation

**October 10th**
- Public Utility Board Budget & Rates Public Review

**October 16th**
- Joint Council/Public Utility Board Study Session Budget & Rates Presentation

**October 24th**
- Public Utility Board approval of preliminary budget & rates

**November 13th**
- City Council first reading of budget & rates

**November 20th**
- City Council second reading of budget & rates

Tacoma Power Cost of Service to Joint Base Lewis-McChord

Study Session Presentation to the Tacoma Power Board
September 26, 2018
Introduction Slide

• August 14-16: JBLM met with Tacoma Power
  • Discussed concerns with the Cost of Service Analysis (COSA)
  • JBLM offered counter-proposal (described in more detail later)

• August 17: Met with Mr. Jones and Mr. Patterson; Met with Ms. Cooley

• Tacoma Power agreed to study the issue prior to the next rate change (2021-2022)

• Tacoma Power proposes to make no changes to the proposed increase for 2019-2020
High Voltage General Rate Increases

• 2015-2016 HVG rates increased by 18.3%; residential rates increased by 6%\(^1\)

• 2017-2018 HVG proposed increase of 4.7%; residential rate increase of 1.3%

---

1 – 2015-2016 increase information subject to confirmation by Tacoma Power staff
Wholesale Net Revenues

Annual Wholesale Net Revenues
2007-2016

*Annual Wholesale Net Revenues are variable from year to year.
Cost of Service Experience – Dr. Larry Blank

• Economics professor at New Mexico State University and the Center for Public Utilities since 2003
• Principal of TAHOEconomics since 1999
• Expert in over 160 regulated proceedings and many municipal and electric cooperative rates analyses
Main Steps in Cost of Service

• Functionalization
  • Production, Transmission, Distribution, General

• Classification
  • Demand (fixed); energy (variable); customer

• Allocation
  • Assignment of costs to the various rate classes

• Cost causation is the driving principle in selecting the most appropriate method for each step

• It is important to also consider the impact on residents in terms of both household electric bill impacts and residential employment at small and large businesses

• Lower residential bills imply higher commercial energy costs, which results in fewer jobs. For example, if given the choice between somewhat lower monthly electric bill and keeping their job, most families will select the latter
Production & Power Expense Classification

- Total Production & Power Expense = $372,545,875 per year (fully loaded and net of other revenues)

- Electric Utilities require a certain amount of power cost to meet **Baseload Energy** needs and a certain amount of power cost to meet **System Peak Demand** needs in the months those peaks occur.

- The type of capacity used to meet Baseload and System Peak is irrelevant to this consideration. Electric Utilities require a mix of baseload capacity and peak demand capacity. Reservoir hydroelectric technology/capacity is suitable for both.

- Other utilities may use a mix of generation technologies, but the fact remains that a portion of the costs serve Baseload and a portion of the costs serve System Peak regardless of the underlying technology used.

- **Fuel costs of other utilities are not included in this classification and allocation decision.**
Production & Power Expense Classification & Allocation

- Tacoma Power Staff have classified 71.6% of Production & Power Expense as necessary to meet **Baseload Energy** needs and 28.4% to meet **System Peak Demand** needs. **JBLM is not contesting** this Classification at this time

- Allocation of 71.6%, or $266,737,817, utilizes a class % of annual energy (kWh) method. **JBLM is not contesting** this Allocation at this time

- Allocation of 28.4%, or $105,808,057, utilizes a method based on 12 months of system peaks (12-CP). **JBLM disagrees** with this allocation

- Tacoma Power’s use of a 12-CP method for System Peak Demand treats these costs as annual Baseload as well

- Tacoma Power’s monthly peak demand data suggest that a 4-CP method is justified as adequately defining system peak demand responsibility (our first analysis showed that 3-CP was appropriate)

**2017-18 Adjustment to Increase Retail Revenue Net Revenue Final Cap**
Recommended Demand Allocation

• Generation assets, regardless of technology, are built/purchased to serve peak loads
• Customers with low load factors tend to drive more of the spike in peak months
• Tacoma Power is a winter peaking utility, driven by the increased heating load of residential customers
• Use of a 4-CP methodology for Tacoma Power follows accepted industry standards and is a modest change within the overall cost of service
Employment Considerations

• J. Garen, C. Jepsen, and J. Saunoris, “The Relationship between Electricity Prices and Electricity Demand, Economic Growth, and Employment,” Center for Business and Economic Research, University of Kentucky, October 19, 2011
  - Estimated a 1% to 0.61% reduction in employment growth following a 25% increase in electricity price

• Center for Business & Economic Research, “Examining the Impact of Electricity and Natural Gas Prices on Manufacturing Employment in Arkansas,” University of Arkansas, September 2015
  - Estimated a 0.054 percent decline in manufacturing employment following a 10% increase in electricity prices

  - Multi-sectoral, multi-customer-class impact analysis estimated net job gains in Arkansas expected from legislation that shifted production cost allocation away from large customers to small customers
