What is pump storage hydro?

Section 1

Section 1: What is Pump Storage Hydro?

Pump Storage Hydro (PSH) is a type of hydroelectric energy storage used by electric power systems for load balancing. The method stores energy in the form of gravitational potential energy of water, pumped from a lower elevation reservoir to a higher elevation reservoir.

P/G efficiency:

$$\frac{\text{Generation energy (downhill)}}{\text{Pumping energy (uphill)}} = \sim 80\%$$

Requirements:

- ✓ Topology – elevation between upper & lower basins
- ✓ Power lines – Access to transmission grid
- ✓ Water Supply

Section 1: What is Pump Storage Hydro?

Types of PSH

Closed – Loop

- ✓ Disconnected from any existing waterway
- ✓ Fewer environmental impacts
- ✓ Makeup water constraints

Open – Loop

- ✓ Connected to existing waterway
- ✓ Ready water supply
- ✓ Additional environmental impacts

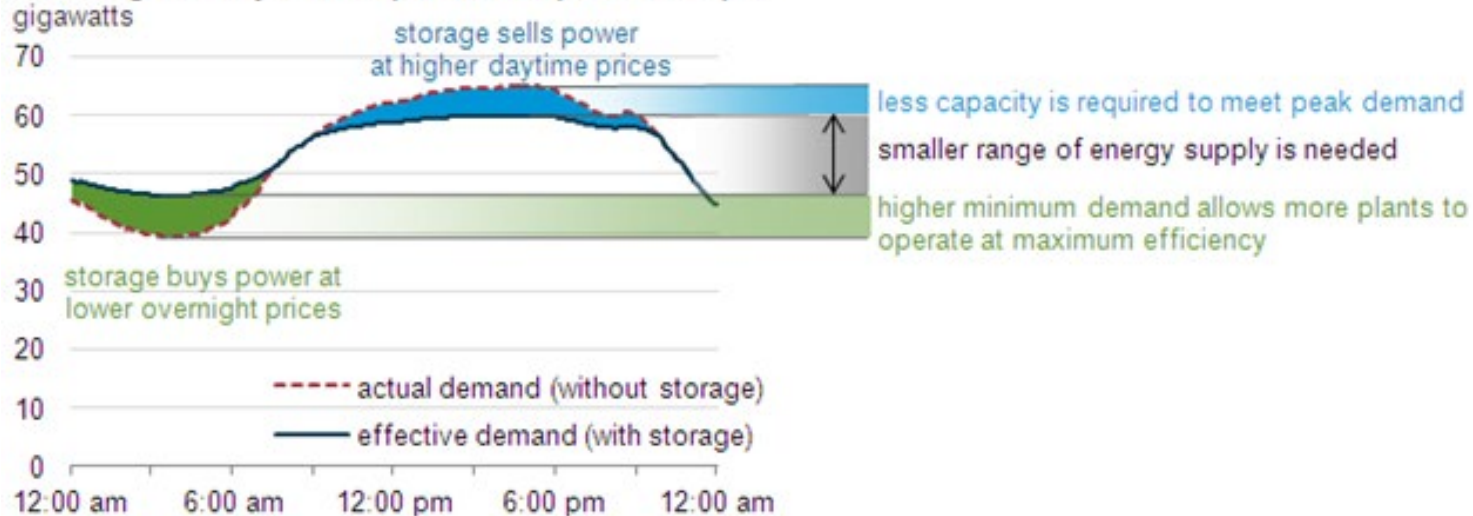

How does it work?

Section 2

Section 2: How does it work?

Traditional purpose

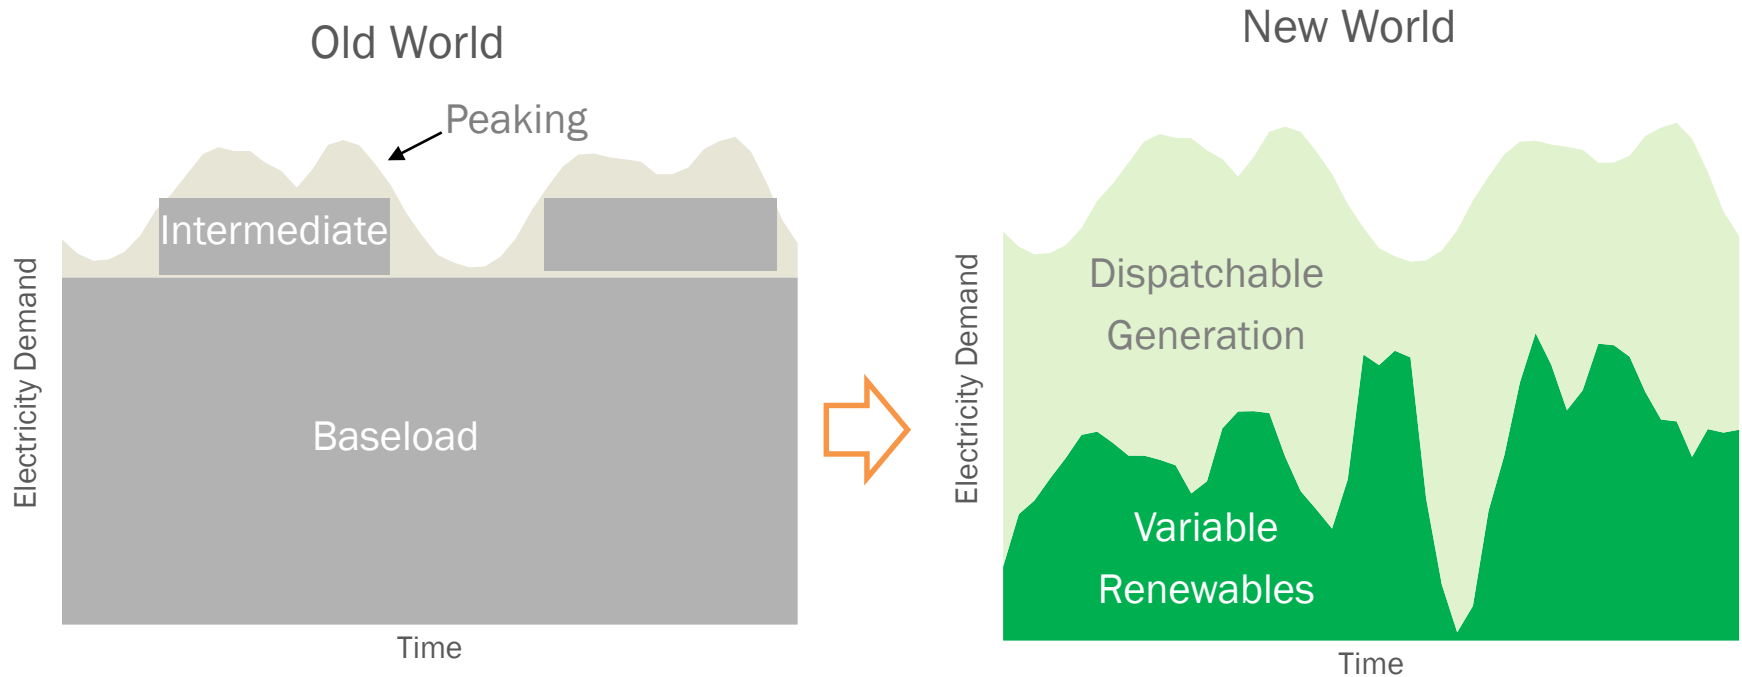

Flattening the daily load shape, 24-hour period example

- ✓ Existing PSH fleet constructed mid- to late-1970s
- ✓ Load Shaping and Peak Shaving
- ✓ Energy Arbitrage, Peak/Off-Peak

Section 2: How does it work?

New PSH interests

- ✓ Increase penetration of variable renewable energy resources
- ✓ Electricity Market Designs: Energy, Capacity and Ancillary Services
- ✓ New Technology – Variable Speed Pumps/Generators

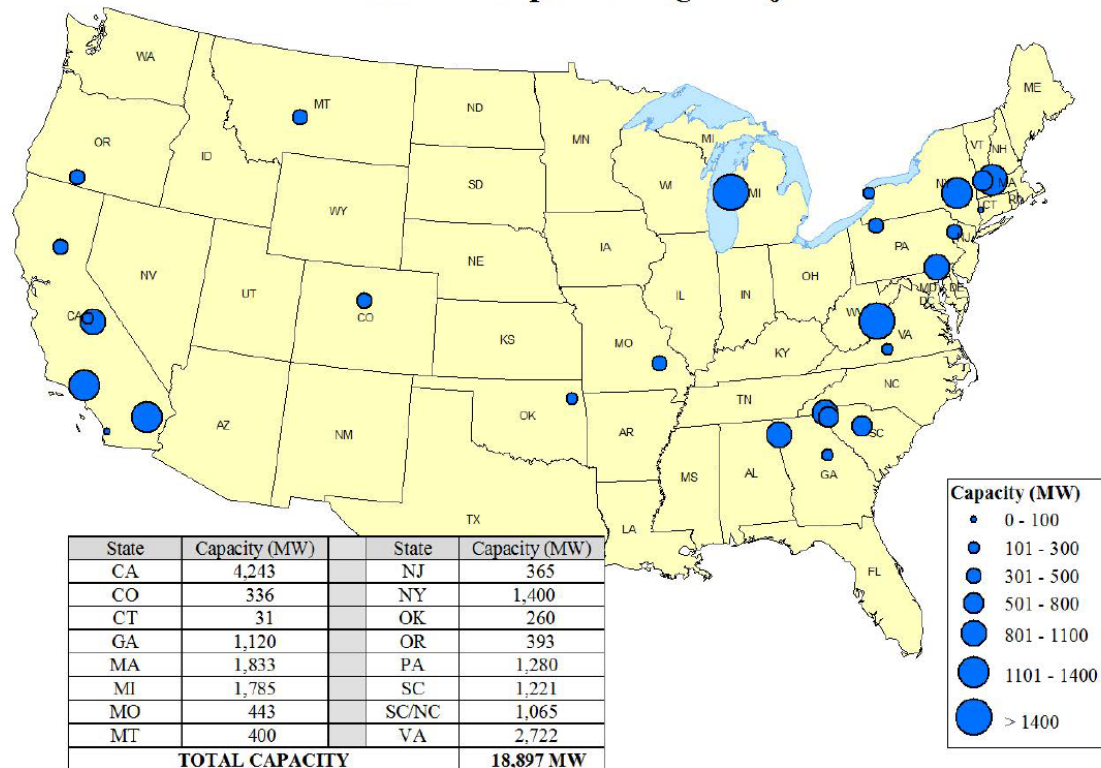

Existing and future projects

Section 3

Section 3: Existing PSH projects

Where in the US?

Licensed Pumped Storage Projects

Source: FERC Staff, September 1, 2019

Section 3: Proposed PSH Projects

Where in the US?

Source: FERC Staff, September 1, 2019

Section 3: Possible PSH Projects

Pump Storage Hydro at Cowlitz?

Section 3: Possible PSH Projects

Pump Storage at Cowlitz

Opportunities

- ✓ Existing project/reservoirs
- ✓ Open 3rd pump/generator bay at Mossyrock
- ✓ Promising economics

Challenges

- ✓ Environmental impacts
- ✓ Additional upper reservoir
- ✓ Re-opens FERC licensing process
- ✓ Transmission: located near critical flowgate
- ✓ Scale (250 – 300 MW)
- ✓ Co-operations

Benefits and challenges

Section 4

Section 4: Benefits & Challenges

Advantages of Pump Storage Hydro:

Flexible and reliable

- ✓ Reacts to network fluctuations
- ✓ Contingency outages
- ✓ Load following
- ✓ Absorbs excess generation
- ✓ Reserve output at low wind or lack of sunshine

Concepts

- ✓ Hybrid – Combining pumped storage with wind and/or solar generation
- ✓ Symbiotic – Renewable Resource used to integrate Renewable Energy with clean hydropower
- ✓ "Green" battery – Currently the most viable utility-scale energy storage technology

Reservoir management and flood control

Exceptional lifetime of more than 80 years

Section 4: Benefits & Challenges

Challenges of Pump Storage Hydro

Projects are Capital Intensive

- ✓ Development (\$millions)
- ✓ Construction (\$billions)

Regulatory

- ✓ FERC Licensing and permitting

Scale

- ✓ Capitalization – Equity vs. PPA, Governance vs. Operations, etc.
- ✓ Joint operations – Shared costs/benefits, project optimization

Market Limitations

- ✓ Missing revenue streams – deriving value from Energy & Ancillary Services (AS).
- ✓ Market Design – lack of market structure for monetizing value clean dispatchable generation resources.

Section 4: Benefits & Challenges

Missing Money

Market prices do not fully reflect the value of investment necessary to meet load

- Insufficient Resource Adequacy standards undervalue existing clean dispatchable generation such as hydro
- Inadequate incentives to invest in new forms of dispatchable generation like Pump Storage Hydro

Summary

Section 5

Section 5: Summary

Future State: Pump Storage Hydro part of a well-integrated grid

Benefits

- Complements Renewable Energy Resources
- Very Flexible Resource
- Improves Reliability
- Longevity

Challenges

- Long-term Economics
- Development costs
- Construction time
- Scale
- Market Design

IRP Update

Section 6

Section 6: IRP Update

Stakeholder Input Process

Working Group Workshops

- Smaller group selected by utility with goals of ensuring committed participation and balance of perspectives
- Responsibility for reviewing materials and providing feedback on assumptions, analysis, etc.

Input Opportunities for Other Community Members

- Observe & comment during open comment time
- Written comment on workshop materials
- Online contact form for general comments

General Information Sharing

- Email distribution list to interested parties
- All materials to be posted on website

Workshop 1 (February 24)

- Introduction to process & key issues

Workshop 2 (March 11)

- Key inputs

Workshop 3 (April 27)

- Analysis framework

Workshop 4 (June 11)

- Analysis results

Section 6: IRP Update

Working Group Membership

Selected with goals of ensuring committed participation and balance of perspectives

Section 6: IRP Update

Anticipated 2020 Study Session Schedule

	Topic	Date
1	Resource planning 101	August 28 (complete)
2	Resource adequacy	October 9 (complete)
3	Our current portfolio & resource options	October 23 (complete)
4	Small nuclear reactors	November 13 (complete)
5	Energy storage	December 4 (complete)
6	Pump storage hydro	January 7 (today)
7	Key inputs: Load & price forecasts, Preliminary metrics, resource options & scenarios	March 25
8	Final metrics, analysis of uncertainty, current resource need and final resource options & scenarios to model	May 13
9	Analysis results & recommendations	July 8
10	(If needed) Revised Results & Recommendations	July 22
11	Approve IRP (BOARD MEETING)	August 12

Section 6: IRP Update

IRP Schedule

		2020												
	Activities	Aniticipated Completion	1	2	3	4	5	6	7	8	9	10	11	12
MODEL & ANALYSIS	Draft base case system model results (current portfolio)	20-Mar-20												
	Final portfolio performance metrics selected	15-May-20												
	Final resources & scenarios selected for evaluation	15-May-20												
	Full draft analysis results	1-Jun-20												
	Final draft IRP document complete	31-Jul-20												
	Submit IRP	14-Aug-20												
	Publish IRP & communicate findings externally	31-Dec-20												
INPUT	Stakeholder Workshops	11-Jun-20												
	PUB Study Sessions	22-Jul-20												
	PUB Approval of IRP	12-Aug-20
