

POWER MOVE #43:

**Knowing how many
birthdays your water
heater has celebrated.**

**If your water heater is more than 10 years old,
now's the time to replace it.**

Most people don't think about their water heater until it stops working, leaving no time to consider the best replacement option. Emergency water heater replacements often come with high stress, expensive costs, and few options. Don't find yourself in that situation! There's a better way - replace your standard electric water heater with a hybrid version today.

We've worked out a special package deal to ensure you get the best price, easiest process, and reliable service on your water heater replacement. For a limited time, you can get a 50-gallon hybrid water heater installed for \$2,500 and use our 0% interest loan to pay for it.

**To get started, call our certified contractor
Great Northwest Installations at 1-866-905-9510.**
