

3 easy ways to make the most of your new ductless heat pump

1. Rely on your ductless heat pump to heat your home.

Turn down existing thermostats on your electric baseboards, wall heaters or furnace.

2. Set your remote control to HEAT mode; set the temperature and leave it.

Temperature will adjust automatically.

3. Clean the filter monthly.

Refer to your product manual for instructions.

Congratulations

on your new energy-efficient ductless heat pump! Following a few simple steps will keep you comfortable, save money on your electric bills and maximize your purchase.

How to use and care for your ductless heat pump

Use

- Set your remote control to HEAT mode during winter and COOL during summer. Avoid AUTO to maximize results
- Use AUTO FAN mode instead of quiet, low, medium or high; the fan will adjust itself
- Use secondary heat such as electric baseboards, wall heaters or furnace as needed
- Leave doors to other rooms open to allow heating and cooling beyond the main living area
- Listen for normal sounds of a low-level fan, occasional whirl, click or rush of fluid – especially when your outdoor unit switches to defrost

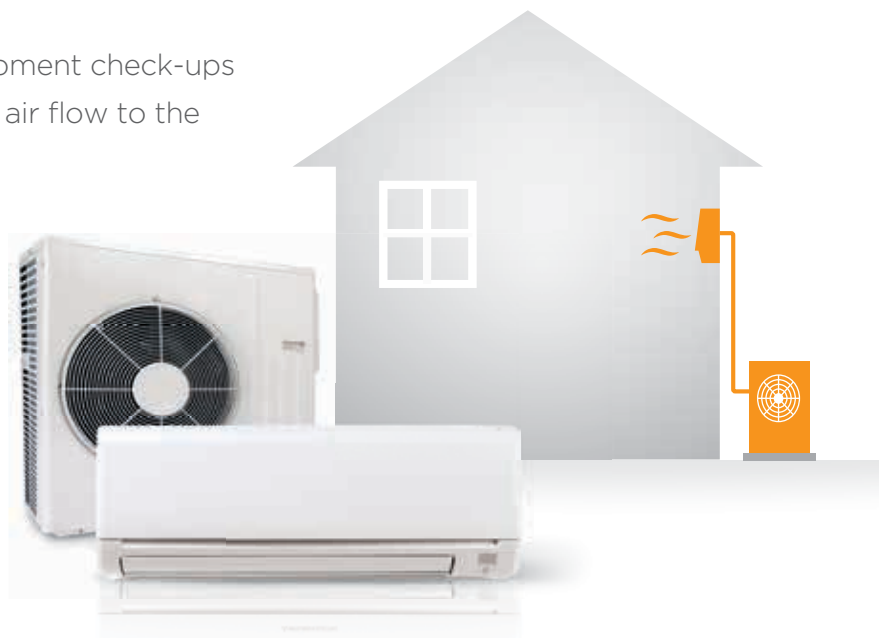

Heat or Cool

Auto Fan

Care

- Clean the air filter monthly; refer to your product manual for instructions
- Call your contractor to schedule equipment check-ups
- Keep plants and debris from blocking air flow to the outdoor unit

This general reference guide does not replace the manufacturer's operation manual. Refer to your manual for more details and information.
